SABIA, Inc. announces Paolo Turrini as its agent in Europe and Middle East

San Diego, CA (Monday, May 28, 2007) SABIA, Inc. a leader in elemental analysis of bulk material announced today the appointment Paolo Turrini of Geneva, Switzerland as its agent in Europe and in the Middle East. Mr. Turrini will be responsible for introducing SABIA's entire line of Prompt Gamma Neutron Activation Analysis "PGNAA" based instruments to the cement production industry, electric power generation industry and the mining industry.

About SABIA, Inc.

SABIA, Inc. is a privately held, venture backed firm established in 2000 by the scientists and engineers who originally commercialized PGNAA technology in the 1980s. Customers use SABIA analyzers for run of mine, sorting and blending applications and for quality control. SABIA introduced its Flagship line of On-Belt analyzers in 2003 in response to the demand for affordable, real-time information of the quality of bulk materials in the Cement Industry, Coal Industry, and Coal Fired Power Industry. "Real-time information is essential for operations to remain competitive in today's environment" states Steve Foster, one of SABIA's founders and Executive Vice President.

About Paolo Turrini

Mr. Turrini has 25 years experience in technology education, telecommunications and industrial automation. He studied physics at the University of Milan and Logic at the University of Lugano, with professor Rogalski from the school of Lukasiewicz and Bochenski. "Mr. Turrini's experience and contacts within our industries and his unwavering commitment to customer service were significant to our decision to ask him to represent SABIA" states Alan Remen, SABIA's Chief Operating Officer. "We expect a long and mutually beneficial relationship with Mr. Turrini."
